

LEE NOAH

Full-Stack Developer | Custom Business Software & Automation

progression.two@gmail.com | github.com/lisy9344

PROFILE

Full-stack developer and photo-studio business owner building web and desktop applications, ERP/CRM systems and workflow automation. The brand generated KRW 300 million in revenue in 2025 and has grown to 14 locations. Develops software for unattended store operations, photo/preset workflows, customer editing and back-office processes, with a broader portfolio spanning commerce, finance, service operations and revenue-generating delivery operations.

SOFTWARE DEVELOPMENT EXPERIENCE

Full-Stack Developer & Photo-studio Business Operator | 2025-Present

- Built software for my own photo-studio brand, which generated KRW 300 million in 2025 revenue, spanning unattended store operations, photo/preset applications, customer editing and business-process automation.
- Expanded and operated the brand to 14 locations; translated first-hand operating requirements into usable interfaces, shared records, automated handoffs and recoverable workflows.
- Developed additional business applications across commerce, customer management, inventory, service operations and delivery operations, including a private Baemin product generating USD 1,000 in monthly recurring revenue as of 4 October 2026.

IN-HOUSE PHOTO-STUDIO PRODUCTS

Boothy, Boothy Selectroom & CutEditor

React · TypeScript · Konva · Tauri · Rust

- Developed camera-connected photo workflows, preset controls and operator interfaces, plus a browser editor for layouts, frames, text, stickers and export.
- Handled viewer readiness, touch input, local image processing and save fallbacks to support the customer journey across in-store and browser interfaces.

Multi-branch Operations ERP & Customer Fulfillment

TypeScript · Next.js · React · PostgreSQL · Prisma · Cloudflare Workers

- Built mobile shift reporting, onboarding, payroll and vendor workspaces; preserved historical wages and intake-time prices so later changes do not alter the basis of past payments.
- Connected customer photo intake, worker assignment, delivery, revisions and ERP settlement through API handoffs, stable idempotency keys and retry handling.
- Built booking/SMS automation for confirmations, pre-visit guidance and service-option rules, connecting reservation data with customer communications.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS. Backend and data: Node.js, NestJS, Python, PostgreSQL, Prisma, SQLite, REST APIs. Desktop: Tauri, Rust. Delivery: AWS, Google Cloud, Cloudflare, Docker; unit, integration and Playwright E2E testing. Core strengths: data modeling, access control, audit trails, background jobs and failure recovery.

SELECTED DEVELOPMENT PROJECTS

LEE NOAH | Independent software portfolio, 2025-Present

Commerce Operations & Customer Lifecycle CRM

Next.js · NestJS · TypeScript · PostgreSQL · Prisma

- Built separate commerce and CRM applications connecting marketplace orders, inventory, fulfillment, settlements, customer behavior, refunds and campaign inputs.
- Implemented background synchronization, source-specific run records and daily reconciliation to expose missing data before teams rely on it for operating decisions.

Inventory & Finance ERP

Next.js · PostgreSQL · Prisma · ExcelJS · Playwright

- Built branch-scoped sales, inventory, expense, margin and closing views; used FIFO completeness checks to distinguish reliable calculations from insufficient data.
- Added audited post-close corrections and atomic accounting-file imports with duplicate detection and mapping previews, protecting historical records during reconciliation.

Service Operations & Meal-management Applications

React · TypeScript · Next.js · PostgreSQL · Supabase

- Built a service-operations ERP for room coordination, staff assignment, settlements and monthly closing, with permissions and guards on payout-affecting edits.
- Developed a separate meal-management application covering member approval, monthly enrollment, mobile tickets, transfers and settlement rules.

Private Baemin Delivery Operations Product

Python · FastAPI · PostgreSQL · Playwright · Windows automation

- Built and operated a private Baemin delivery-operations product generating USD 1,000 in monthly recurring revenue as of 4 October 2026. Source code remains private; product architecture can be discussed in a technical interview.
- Designed scheduled workflows, durable jobs, team updates and operational monitoring with queue recovery, identity/completeness checks and freshness states.

EARLIER EXPERIENCE

Doolim-Yaskawa — Painting Robot Systems Engineer | 2014-2025. Developed and integrated control, vision and robot systems for Hyundai production-line projects in the US, Indonesia and South Korea; brought that systems-integration background into software development.

EDUCATION

Shin Ansan University — Associate Degree in Electrical Engineering (two-year program)
